

TABLE OF CONTENTS

PART I.

1. INTRODUCTION	1
2. SILETZIA: ORIGIN AND HISTORY	3
2.1. Nature of Siletzia	3
2.2. Accretion of Siletzia	7
2.3. Discussion	15
3. THE MIDDLE EOCENE EVENT	19
3.1. Central Washington Cascades	20
3.2. Coast Mountains/North Cascades	25
3.3. Northwest Cascades	26
3.4. Vancouver Island	27
3.5. Summary	29
4. EOCENE TECTONIC MODEL	31
4.1. Early Eocene	31
4.2. Middle Eocene	32
4.3. Late Eocene and subsequent events	34
5. DISCUSSION	35
5.1. Relationship of the mid-Eocene event and the Laramide orogeny	35
5.2. Neotectonic significance of Eocene structures	37
<i>Eocene suture</i>	<i>37</i>
<i>Straight Creek fault system</i>	<i>39</i>
6. SUMMARY AND CONCLUSIONS	43

(continued)

PART II

1. INTRODUCTION	46
1.1. Sources of data and provisos	48
1.2. Note on the cross sections	50
2. CORRELATIONS OF STRUCTURE AND SEISMICITY	53
2.1. General distribution of seismicity	53
2.2. Eastern transect	53
<i>Structures south of and within the OWL</i>	53
<i>Structures of the northeastern fold belt</i>	56
2.3. Western transect	59
<i>Toppenish Ridge and the Satus Pass uplift</i>	59
<i>Structures of the western fold belt, in and around the OWL</i>	61
2.4. Northwestern Columbia Basin and the Okanogan highlands	65
2.5. Summary and discussion	68
3. STRAIN VECTORS AND STRAIN CHANGES	
3.1. Columbia embayment	70
3.2. Modulation of strain by dynamic topography	74
3.3. Relationship of the Yakima fold belt to the Basin and Range province	78
3.4. Origin and nature of the Olympic-Wallowa line (OWL)	79
4. WHAT LIES UNDER THE BASALTS?	81
4.1. Speculations based on the Baja B.C. hypothesis	81
4.2. Eocene structural continuity	85
5. SUMMARY AND CONCLUSIONS	86
III. REFERENCES	89
