

Figure 16. Seismicity of the Columbia Basin and environs 1969-2001 (PNSN). Profiles indicated by numbered lines; dashed boxes envelope projected events. Focal mechanisms are upper hemisphere: blue, reverse; green, strike-slip; red/orange, normal. Black and red areas correspond approximately to post-middle Miocene uplifts (areas over 2000 m. are white), while the Columbia Basin is shown in blue. Figure and profiles generated by Geotouch (Lees, 1995).
